

How to start?

(The first character must be placed in the left margin, if it is not the program will think the file is empty and will not create the PDF copy)

This program has been assigned the default folder c: / Edit_TxT_PdF and other sub-c: / Edit_TxT_PdF / Doc_PDF c: / Edit_TxT_PdF / Doc_TXT If you alter these folders the program will not work.

1°- Two Options

Create file name, put here the name of the new file extension "txt" and the program automatically generates.

If you do not want to create file name, we go directly to Editor-Reader Write a letter here, recuerte not exceed the horizontal part of the right, because when you generate the PDF, cut out.

2°- TXT Record, this option would complete the drafting of text that has been created to save the file you can overwrite is created if it has got the option of whether or File Name has opted for direct writing in Editor-Reader in new record documento name, here if you need the file extension "txt". If you must generate a copy of this TXT to PDF file must be in the folder c: / Edit_TxT_PdF, ie the principal. Subfolders c: / Edit_TxT_PdF / Doc_PDF c: / Edit_TxT_PdF / Doc_TXT only are to receive the new copy of the PDF and TXT file created by you If you load a copy of c: / Edit_TxT_PdF / Doc_TXT, we must save root folder with another name, if you want to create another PDF file.

3°- Find a load TXT file in any folder and can be to regenerate a PDF copy sow that is in the folder c: / Edit_TxT_PdF, copies of TXT in c: / Edit_TxT_PdF / Doc_TXT.

4°- Search PDF opción is the same as above but for PDF files, subfolder in the c: / Edit_TxT_PdF / Doc_PDF.

5°- Delete Delete TXT with any TXT file, you Erasing the option Camcelar.

This little editor is totally Free and you can modify only send an e-mail of changes to mustalopez@gmail.com

I just noticed that if you load the TXT file from another folder that does not is the main c: / Edit_TxT_PdF can not generate the PDF files. is This Bulgarian program that are said to "explode" and that does not happen I have put that message windows will not be hanging the program.

Also I found that not to create PDFs I get the that's why we put bar to indicate the other folders, I pressed some signs and post if some others do not go, the Euro sign € if it comes out.

A greeting to all who are excited about this tool
Harbour + Minigui
KhGhalmi & Mustafa

Final Note: Bicahi Esgici to correct the fault has been placed in Public

cPrgFolder: GetCurrentFolder = ()

and the Procedures BuscaFicheroF, BuscaFichero, TextoGraba, Borrax
SetCurrentFolder (cPrgFolder)

this is fixed the error that occurred when changing sub_folder.
